

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently amended) [[An]] A camera having an electroluminescence display device
comprising:
a substrate having a first surface and a second surface wherein the second surface is on an opposite side of the substrate with respect to the first surface;
a thin film transistor formed over the first surface of the substrate;
a planarizing film formed over the thin film transistor;
an insulating film formed over the substrate;
a first electrode formed on the planarizing film and electrically connected to the thin film transistor;
~~an electroluminescence element formed over the substrate, the electroluminescence element comprising:~~
~~an anode;~~
~~an emission layer formed over the [[anode]] first electrode;~~
~~a cathode second electrode formed over the emission layer[[:]],~~
~~wherein the second surface of the substrate has a spherical configuration which acts as a lens.~~
~~a lens formed over the electroluminescence element; and~~
~~an adhesive in contact with the insulating film and the lens,~~
~~wherein the lens has a spherical surface to which the electroluminescence element emits a light.~~

2. (Canceled)

3. (Currently amended) ~~An electroluminescence display device~~ The camera according to claim 1, wherein said emission layer comprises an organic electroluminescence material ~~or an inorganic electroluminescence material~~.

4-31 (Canceled)

32. (New) The camera according to claim 1, wherein said emission layer comprises an inorganic electroluminescence material.

33. (New) The camera according to claim 1 wherein the planarizing film comprises a resin.

34. (New) The camera according to claim 1 wherein the camera is a video camera.

35. (New) The camera according to claim 1 wherein the camera is a digital camera.

36. (New) A camera having an electroluminescence display device comprising:
a substrate having a first surface and a second surface wherein the second surface is on an opposite side of the substrate with respect to the first surface;
a thin film transistor formed over the first surface of the substrate, said thin film transistor comprising an LDD region and a gate electrode partly overlapping the LDD region;
a planarizing film formed over the thin film transistor;

a first electrode formed on the planarizing film and electrically connected to the thin film transistor;

an emission layer formed over the first electrode;

a second electrode formed over the emission layer,

wherein the second surface of the substrate has a spherical configuration which acts as a lens.

37. (New) The camera according to claim 36, wherein said emission layer comprises an organic electroluminescence material.

38. (New) The camera according to claim 36, wherein said emission layer comprises an inorganic electroluminescence material.

39. (New) The camera according to claim 36 wherein the planarizing film comprises a resin.

40. (New) The camera according to claim 36 wherein the camera is a video camera.

41. (New) The camera according to claim 36 wherein the camera is a digital camera.

42. (New) A camera having an electroluminescence display device comprising:

a substrate having a first surface and a second surface wherein the second surface is on an opposite side of the substrate with respect to the first surface;

a thin film transistor formed over the first surface of the substrate, said thin film transistor comprising an LDD region and a gate electrode partly overlapping the LDD region;

a passivation film formed over the thin film transistor;
a first electrode formed over the passivation film and electrically connected to the thin film transistor;
an emission layer formed over the first electrode;
a second electrode formed over the emission layer,
wherein the second surface of the substrate has a spherical configuration which acts as a lens.

43. (New) The camera according to claim 42, wherein said emission layer comprises an organic electroluminescence material.

44. (New) The camera according to claim 42, wherein said emission layer comprises an inorganic electroluminescence material.

45. (New) The camera according to claim 42 wherein the planarizing film comprises a resin.

46. (New) The camera according to claim 42 wherein the camera is a video camera.

47. (New) The camera according to claim 42 wherein the camera is a digital camera.

48. (New) A camera having a view finder which includes an electroluminescence display device comprising:

a substrate having a first surface and a second surface wherein the second surface is on an opposite side of the substrate with respect to the first surface;

a thin film transistor formed over the first surface of the substrate;

a planarizing film formed over the thin film transistor;

a first electrode formed on the planarizing film and electrically connected to the thin film transistor;

an emission layer formed over the first electrode;

a second electrode formed over the emission layer,

wherein the second surface of the substrate has a spherical configuration which acts as a lens.

49. (New) The camera according to claim 48, wherein said emission layer comprises an organic electroluminescence material.

50. (New) The camera according to claim 48, wherein said emission layer comprises an inorganic electroluminescence material.

51. (New) The camera according to claim 48 wherein the planarizing film comprises a resin.

52. (New) The camera according to claim 48 wherein the camera is a video camera.

53. (New) The camera according to claim 48 wherein the camera is a digital camera.

54. (New) A camera having a view finder which includes an electroluminescence display device comprising:

a substrate having a first surface and a second surface wherein the second surface is on an

opposite side of the substrate with respect to the first surface;

a thin film transistor formed over the first surface of the substrate, said thin film transistor comprising an LDD region and a gate electrode partly overlapping the LDD region;

a planarizing film formed over the thin film transistor;

a first electrode formed on the planarizing film and electrically connected to the thin film transistor;

an emission layer formed over the first electrode;

a second electrode formed over the emission layer,

wherein the second surface of the substrate has a spherical configuration which acts as a lens.

55. (New) The camera according to claim 54, wherein said emission layer comprises an organic electroluminescence material.

56. (New) The camera according to claim 54, wherein said emission layer comprises an inorganic electroluminescence material.

57. (New) The camera according to claim 54 wherein the planarizing film comprises a resin.

58. (New) The camera according to claim 54 wherein the camera is a video camera.

59. (New) The camera according to claim 54 wherein the camera is a digital camera.

60. (New) A camera having a view finder which includes an electroluminescence display

device comprising:

 a substrate having a first surface and a second surface wherein the second surface is on an opposite side of the substrate with respect to the first surface;

 a thin film transistor formed over the first surface of the substrate, said thin film transistor comprising an LDD region and a gate electrode partly overlapping the LDD region;

 a passivation film formed over the thin film transistor;

 a first electrode formed over the passivation film and electrically connected to the thin film transistor;

 an emission layer formed over the first electrode;

 a second electrode formed over the emission layer,

 wherein the second surface of the substrate has a spherical configuration which acts as a lens.

61. (New) The camera according to claim 54, wherein said emission layer comprises an organic electroluminescence material.

62. (New) The camera according to claim 54, wherein said emission layer comprises an inorganic electroluminescence material.

63. (New) The camera according to claim 54 wherein the planarizing film comprises a resin.

64. (New) The camera according to claim 54 wherein the camera is a video camera.

65. (New) The camera according to claim 54 wherein the camera is a digital camera.
